

Vapor Abrasive Blasting

What is Vapor Abrasive Blasting

Vapor Abrasive blasting is similar to dry blasting, except that the blast media is moistened prior to impacting the surface and creates up to 92% less dust.

Major Benefits

- Eliminates up to 92% of all airborne particles and dust.
- Uses 40-50% less abrasive than conventional dry blasting.
- Hoses will last, 3 to 5 times longer.
- System consumes between 35 to 70 kg of abrasive per hour.
- Can use up to 400 feet of hose.
- 3 options: Ability to blast, rinse and dry surface.
- Uses less than 1 liter of water per minute.
- To prevent flash rust from 48 to 72 hours, add a salt remover/inhibitor to the water tank.
- Less need for containment, lowering clean-up/disposal cost.
- Can be used during rain or high humidity.
- Blast pressures from 30 to 130 psi, pot is pressurized by water.
- Restore delicate surfaces like wood/marble, as well as all kinds of coating removal and industrial blasting.
- Systems are made from the finest materials that can be used 24/7 without any problems.
